

agentpad13 v2 — optional PORON ledge-gasket kit

1:1 cutting template · derived from band rabbet-ledge constants · NO geometry change

Material: 0.5 mm PORON foam, 3M 468/9471-class adhesive back · 10 segments · 15 × 1.2 mm each

Stick to the BAND ledge underside (z +0.3); 0.5 into 0.3 = 40% compression (PORON 20-50% band). OPTIONAL — bare ledge is already the 0.3 mm backstop.

50 mm scale bar

PRINT AT 100% / ACTUAL SIZE (no 'fit to page'/'shrink to fit'). Then measure this bar — it MUST read 50 mm.

Legend:

solid red rect = CUT LINE (0.5 mm PORON segment, adhesive side down)

grey outline = band ledge ring (reference) grey dashed = board edge

pink circle = corner-cap / socket keep-out blue = USB aperture keep-out

10 segments: W×3 E×3 (y 25/50/75) + N×2 S×2 (x 24.9/59.3); ~180 mm² foam total.
